

# AI Prompt Cheat Sheet

Write prompts that actually work — the formula, patterns, and examples

## THE 5-PART FORMULA

Role + Task + Context + Format + Tone

“Act as [ROLE]. Do [TASK]. Context: [BACKGROUND]. Format: [STYLE]. Tone: [VOICE].”

Example: “Act as a senior copywriter. Rewrite this product description. Format: 3 short bullets. Tone: friendly, confident.”

## PROMPT PATTERNS

| Pattern          | When to use it                           |
|------------------|------------------------------------------|
| Act as...        | Give the model a specific role/expertise |
| Chain-of-thought | “Think step by step” for logic & math    |
| Few-shot         | Show 2–3 examples first, then the task   |
| Step-by-step     | Force an ordered, repeatable output      |
| Refine & iterate | “Improve this...” / “Make it shorter”    |
| Constraints      | Set length, audience, format, do/don't   |

## POWER VERBS

|                                    |                                     |                                    |                                     |
|------------------------------------|-------------------------------------|------------------------------------|-------------------------------------|
| <input type="checkbox"/> Summarize | <input type="checkbox"/> Draft      | <input type="checkbox"/> Translate | <input type="checkbox"/> Prioritize |
| <input type="checkbox"/> Explain   | <input type="checkbox"/> Rewrite    | <input type="checkbox"/> Analyze   | <input type="checkbox"/> Debug      |
| <input type="checkbox"/> Compare   | <input type="checkbox"/> Brainstorm | <input type="checkbox"/> Outline   | <input type="checkbox"/> Simplify   |

## QUICK WINS

• Add “ask me questions before you answer” · • “Give 3 options” · • “No jargon” · • “Output as a table”
