

Psychopharmacology Cheat Sheet

Major drug classes, examples, and monitoring

Educational reference — not a prescribing or diagnostic tool.

ANTIDEPRESSANTS

SSRI — fluoxetine, sertraline, escitalopram · SNRI — venlafaxine, duloxetine.

Watch: activation, GI upset, sexual side effects, discontinuation syndrome.

ANTIPSYCHOTICS

Typical — haloperidol · Atypical — risperidone, olanzapine, quetiapine, aripiprazole.

Watch: EPS, metabolic syndrome, sedation; monitor weight, glucose, lipids.

MOOD STABILIZERS

Lithium (monitor levels + renal/thyroid) · Valproate (LFTs, levels) · Lamotrigine (rash/SJS).

ANXIOLYTICS & STIMULANTS

Benzodiazepines — lorazepam, clonazepam (dependence) · Stimulants — methylphenidate, amphetamines (BP, appetite, misuse).
